

# Why we need you

Every minute, someone is diagnosed with a lung condition.

1 in 5 people will develop a lung condition in their lifetimes.

Lung conditions are the third biggest killer in the UK.

We have the worst death rate for lung disease in western Europe.

Lung conditions receive only 2% of public health research funding.

2/3 asthma deaths could be prevented with better routine care.

Over 700,000 people are hospitalised with a lung condition every year.

Someone dies from lung disease every five minutes.
